

# >> CENTRAL VACUUM CLEANING

## >> FEATURES:

- Centralized waste collection
- High capacity vacuum pump
- Systems designed for multiple simultaneous users
- High efficiency filtration systems with compressed air jet pulse cleaning
- 2nd stage backup filter
- Sanitary 304 SS construction
- Anti-static hoses
- Aluminum inlet hose connection valves
- Non-plugging pipework design
- Low maintenance design
- Easy to use

## Cleanliness Redefined

Central vacuum cleaning systems are designed to enable the highest standards of cleanliness to maintain food, dairy and pharmaceutical plants.

Each system includes a centralized waste receiving hopper and vacuum pump connected to a reticulated pipe network throughout the required area, with inlet isolation flap valves at convenient locations. A variety of hoses and nozzle fittings are available to enable effective cleaning of all floors, walls, crevices, pipes, ductwork and machinery. Eliminates the inconvenience of portable vacuum cleaners.

## Available Options

- Widest variety of hose and nozzle fittings—extensions, curved, corner, crevice etc.
- Explosion and flameproof designs
- Waste collection options—drums, bags, bins, etc.
- Continuous or intermittent dumping of collected waste
- Waste compaction systems
- Mobile collection systems
